# WHY *Choose* US?

## COMPANY PROFILE

Polished Glazed tiles are the highly necessitated tiles among the competent interior designers. These glazed vitrified tiles are created from a clay called porcelain clay. They are produced using a specialized methodology known as a dust-pressed method, after that they are printed using digital printing technology. In the printing methodology, the tile designs are printed digitally on the surface of the polished and glazed vitrified tiles.

Due to the usage of hi-tech printing technique, the polished and glazed vitrified tiles are attractive, and they retain their shine, luster, design for a longer period.

## ACHIEVEMENTS

## CERTIFICATION

## **SOLUBLE SALT**

Nano Polished tiles are one of the types of Vitrified tiles that are durable, resistant to scratch and stain, stronger and shiny finish. The tiles are formed using vitrification process to achieve the hardness and strength.

These types of tiles are having less water absorption as compared to other ceramic tiles. The vitrified tiles are having a smoother surface and water absorption is less  $<0.05\%$ . Nano polish tiles are tiles that are chemically coated with help of nano chemical that fills the small pores in the tiles. The nano chemical will help to create an invisible layer on the surface of the vitrified tiles.
